Shawon Haque

Full Stack Developer

shawon404.141@gmail.com | github.com/shawonhaque | shawonhaque.github.io

PROFILE

Full Stack Developer working across the modern JavaScript ecosystem, with a focus on React.js and Next.js on the frontend and Node.js on the server. Builds reusable, accessible interfaces on top of clean, maintainable architecture, and treats performance, accessibility and security as defaults rather than additions.

TECHNICAL SKILLS

Frontend	HTML, CSS, JavaScript, responsive layout, web accessibility
Frameworks & libraries	React.js, Next.js
Backend	Node.js, REST APIs
Databases & services	PostgreSQL, Supabase (Row Level Security)
Languages	JavaScript, TypeScript
Tooling	Git, GitHub, GitHub Actions, VS Code, Linux

SELECTED PROJECTS

NEXORA — Full Stack Knowledge Platform Live demo · Source on GitHub

React 18, TypeScript, Vite, Tailwind CSS, Supabase, PostgreSQL

- Built a content platform for news, books, study resources and writing, with sixteen routed views including full-text search and light/dark theming.
- Designed a PostgreSQL schema and enforced Row Level Security on every table, so the database decides who may read or write each row rather than the client.
- Added an authenticated admin area with role-based access, and automated deployment to GitHub Pages via GitHub Actions.
- Aggregates live publisher feeds at build time so the published site stays current without manual updates.

Personal Portfolio Live site · Source on GitHub

HTML, CSS, JavaScript, SEO, Accessibility

- Designed and built a responsive, accessible single-page site with no framework overhead and no build step.
- Implemented light and dark themes with system detection, keyboard navigation, visible focus states and reduced-motion support.
- Delivered complete SEO and social metadata, structured data, a sitemap and a custom 404 page.

ADDITIONAL

- Open to full-time roles, freelance work and collaboration.
